B073 is a powder product that uses a combination of heat, active-oxygen generation, fizzing action, and caustic activity to dissolve organic matter in drains and restore flow.

Dissolves Hair, Wax, Oils, Grease, Slime, Soap Scum, Mineral Deposits, Food Particles, Urine Salts, Sludge.

Safe to use in: Sinks, Showers, Bath Tubs, X-Ray Sinks, Floor Drains, Grease Traps, Septic Systems, Toilets & Urinals, Garbage Disposals, Condensate Drains, Drinking Fountains.

## BENEFITS

- Biodegradable
- Safe on chrome and brass
- Produces no fumes
- Pleasant citrus scent
- Restores full flow
- Reaches a maximum temperature of 57°C
- Safe in metal, cast iron and most plastic pipes
- Safer alternative to powerful liquid acid cleaners.

## DIRECTIONS

**DRAINS:** To open clogged or slow drains, slowly pour 1 capful (3 tablespoons) into drain opening and follow immediately with 2 litres of warm water.

Repeat once per week for regular drain maintenance. For drains receiving large amounts of organic matter (kitchen floors, laundry sinks, and drains) use 2 to 3 capfuls two to three times per week.

**GREASE TRAPS:** For initial treatment, use 500 grams for each 400 litres of trap capacity. Repeat this initial treatment for three weeks; then use 250 grams per 400 litres weekly. Apply by dissolving the desired amount of B073 into water at a rate of 500 grams per 4 litres. Then pour the B073 solution down the drain lines running into the grease trap.

**SEPTIC SYSTEMS:** Use 500 grams for each 2000 litres of system capacity (or per 5 people using the system) as an initial treatment. Flush into toilets. Then use 500 grams per month for maintenance. To keep drain field and leach beds operating properly, dissolve 500 grams in warm water and pour into distribution box. Repeat this treatment weekly until flow is improved.

**TOILETS & URINALS:** To open clogged and slow toilets and urinals, slowly pour 1 capful (3 tablespoons) into the bowl and immediately flush. Applications may vary depending on the toilet.
