England

Designed for use as a foam contact cleaner in the food industry. The use of high foaming cleaners produces longer contact times as required for effective cleaning.

FEATURES

POWERFUL High degree of alkalinity ensures a quick cleaning time when tackling stubborn grease and animal fats.

TOLERANT Effective in hard water areas.

ECONOMICAL Used at dilution ratios of between 1 and 2%.

APPLICATION

Suitable for use in many areas of the food processing industry.

DIRECTIONS

Designed for use in combination with a foam generating cleaning lance. Set the adjustment to produce a creamy stable foam with little tendency to run off vertical surfaces. Allow to stand for 5-15mins and then wash away the foam with the chemical feed turned off.
