A rinse cycle additive for use in combination automatic wash machines. May also be used to improve the rinsing stage after the use of proprietary degreasers.

FEATURES

DEFOAMING Removes the foam generated by surfactant containing cleaning products.

NON STREAKING Combination of surfactants and solvents cleans without effort.

APPLICATION

Principally as a rinse aid additive in automatic washers for china, crockery and glassware.

DIRECTIONS

Use as directed by the equipment manufacturer. This will usually be between 1:500 and 1:800 as a proportion of the rinse cycle water.
