M141T is a thickened version of MSH M141A toilet cleaner which combines a powerful bactericide with a mineral acid to effectively remove lime and other scale from toilets, bowls, urinals and channels.

FEATURES

CLINGS The thickener used in M141T enables the product to cling to the surface being cleaned giving a depth of cleaning agent to remove even the most difficult deposits.

FAST The acid strength of M141T enables scale to be removed quickly and effectively and the included detergents permit the easy rinsing residues.

CLEANS Kills odours and leaves surfaces clean and germ free.

FRESHENS Imparts a fresh fragrance to the wash room creating a more pleasant atmosphere.

DIRECTIONS

For toilets and urinals, pour or spray on to the surface and allow to work for 5-10 minutes. An acid resistant brush may be used to remove stubborn deposits. Flush or wash away with clean water.

Caution: Do not mix with bleach or other cleaning materials or dangerous chlorine gas may be produced.

Not suitable for continuous use on stainless steel.
