England

M151 is an inhibited form of concentrated sulphuric acid, which is able to break up and dissolve organic wastes such as fats, greases, paper and fabrics. It is ideal for removing blockages in toilet and waste pipe work systems.

## FEATURES

**STANDBY** Ideal to keep on standby in case of unexpected blockages of outflows.

**POWERFUL** Will dissolve a wide range of organic soils and materials.

**INHIBITED** M151 is inhibited to reduce any potential effect of the acid on metal fitting and pipe work.

## DIRECTIONS

M151 is provided in one-shot packs. The pack should be carefully poured into the sink, toilet, drain or sump. The high density of the material will carry it down through the system. Allow to stand for a few minutes and then flush the system with water. Keep at a distance.

**Caution:** Always use gloves and a face shield when handling M151. Do not add water to it; always add it to water or a violent reaction may occur. Heat is generated by its reaction.

Do not allow into contact with bleach or other cleaning agents. The heat and reaction can damage some plastic pipes.
