M308 is a powerful mixture of solvents and alkaline cleaners used for the removal of carbon deposits of engine and mechanical components.

FEATURES

PENETRATES Able to remove burnt on deposits from oils, exhausts and cylinder heads.

POWERFUL It will dissolve greases, strip paint and brighten cast aluminium items.

RENOVATES engine and machine components

WATER SEAL contains an integral water seal to reduce evaporation and drag out losses.

DIRECTIONS

Use as supplied in a cold soak tank. Ensure that components are fully immersed.

Not suitable for use on die cast zinc and zinc-containing alloys.
